**Global Logistics**-Donald Waters 2014-09-03 The field of logistics continues to develop at a remarkable pace. Until recently, logistics was barely considered in long-term plans, but its strategic role is now recognised and lies at the heart of long-term plans in almost every business. Reasons for this change include: communications and information technology offer new opportunities; world trade grows; competition forces operations to adopt new practices and become evermore efficient; and the concern for the environment increases. Add to this the increased emphasis on consumer satisfaction, flexible operations and time compression, and it's clear that getting logistics right is important. This 7th edition of Global Logistics, edited by Stephen Rinsler and Donald Waters, has been thoroughly revised and updated to reflect the latest trends, best practices, and cutting-edge thinking on global logistics. It provides guidance on important topics, including agile supply chains, IT, sustainability and performance management, collaboration, outsourcing and humanitarian logistics. This edition of Global Logistics provides new chapters on supply chain trends and strategies, fulfilling customer needs, and supply chain vulnerability. There are also dedicated new chapters on China and Central and Eastern Europe to assess developments across the globe. This edition serves as a forum for acknowledged sector specialists to discuss key logistics issues and share their authoritative views. The new edition introduces new contributors, including leading thinkers from international universities and businesses. Global Logistics is an invaluable source of guidance and practical advice for students, managers and practitioners, who will find it an essential text that also includes online resources. Online resources available include a student manual with key learning outcomes for each chapter.

**Freight Transport and the Modern Economy**-Michel Savy 2013-06-26 Freight Transport and the Modern Economy adapts a well-known textbook by Michel Savy, revising, extending and updating it for British, European and international readers. It deals not only with the technical aspects of transport, logistics and
supply chain management, but also the interactions between transport professionals and the public authorities in the modern social, political, economic and environmental context. The transport of freight is presented as a system, mixing empirics and theory, showing how transport itself functions and also its strong influence on the modern economy, with a growing volume of production, turnover and employment. The nature of freight transport, an industrial process widely marketed as a service, is analysed in depth, explaining the main characteristics of the transport operation, its market and the regulatory context. The main actors, the professional actors (carriers, shippers and other agents) and the public authorities are introduced, and their behaviour and interactions are clarified. This comprehensive approach allows the reader to go further and consider in particular the approaches and practices of transport by carriers, customers, logistics managers, political decision makers and citizens, to tackle long range issues such as the ‘decoupling’ of production and transport recommended by some institutions and experts, or the capacity of the freight transport industry to reduce its contribution to pollution and climate change. This book has a wide scope in its technical, economic, social, political and environmental context, in contrast to existing transport literature focused on individual aspects, such as transportation planning (usually for cars or passengers), logistics (essentially management issues), or individual transport modes. This book is comprehensive in its treatment of freight transport and in its use of multiple disciplinary perspectives.

**Cross-Chain Collaboration in Logistics** - Frans Cruijssen 2020-09-23 This book examines cross-chain control centers (4C), an ambitious concept in supply chain management and logistics that is intended to foster collaboration between different supply chains to increase efficiency. It provides an overview of the main results, insights, and other developments in the academic field of horizontal collaboration. Furthermore, it gives recommendations to governments, commercial companies, and academia on how to proceed with horizontal logistics collaboration in the years to come. To link research with practice, the book takes the Dutch project on cross-chain collaboration centers (4Cs) and identifies a typology of existing patterns for horizontal collaboration in supply chains. Finally, the book zooms in on the Netherlands as a case-study of intense public-private partnerships to develop 4C as a mature logistics value proposition. It provides an overview of the accomplishments in the government supported 4C projects and offers a critical reflection of why some more ambitious and structural solutions have not found solid ground yet. The book is of value to researchers and professionals in the supply chain domain.

**Moving Forward - Matias Herrera Dappe** 2019-10-30 The erosion of its competitiveness is raising concerns about the sustainability of Bangladesh's growth model based on exports of ready-made garments. To safeguard its comparative advantage in ready-made garments and diversify its exports basket, Bangladesh needs to increase its competitiveness. Improving logistics performance is an important lever with which to do so. Moving Forward: Connectivity and Logistics to Sustain Bangladesh’s Success presents a comprehensive assessment of logistics performance and its main determinants. It analyzes freight demand at a spatially disaggregated level, quantifies logistics costs, including the costs of externalities, looks at the factors that determine the stock and quality of infrastructure, and examines the incentives to provide logistics services of a certain type and quality and to charge the observed prices. It also quantifies the potential impacts of removing transport and logistics inefficiencies on Bangladesh’s exports and economic geography using a spatial general equilibrium model. Bangladesh’s congested, unreliable, and unsophisticated logistics system imposes high
costs on the economy. Making it efficient requires a holistic system-wide approach that is based on a comprehensive strategy; improves the quality, capacity, and management of infrastructure; improves the quality and integration of logistics services; and achieves seamless regional connectivity. Moving Forward will be of interest to policy makers, private sector practitioners, and academics with an interest in the performance of Bangladesh's transport and logistics sectors.
