Knowledge and Innovation- Helen Brown 2007-10-17 This new book presents case studies from the US, the UK and Japan. Packed full of vignettes from cases studies and subscribing to a socio-cultural approach rather than the often tacit assumption that knowledge and 'technology transfer' is a logistical problem, this excellent volume illuminates the often misunderstood process of knowledge transfer. Arguing that partnership between public and private sector organizations can take many forms, some of which are very complicated Brown shows that 'partnership' should not be prescribed as a panacea for the delivery of complex policy in education, health and economic regeneration. Instead policy makers need to adopt a much more subtle and sophisticated concept of multi-agency partnership that acknowledges the time and effort needed to build trust and new shared practices. Taking issue with weak theories of change endemic in some policies and emphasizing the process of knowledge creation and the significance of consequent changes in the dynamics of human relations Brown conceptuallyizes innovation as collaboration between diverse organizations and individuals, the result of which is organizational learning. This book will be of great interest to students and researchers interested in policy studies, business and management and education, as well as policy makers engaged with communities of practice theory.

On Evaluating Curricular Effectiveness-National Research Council 2004-11-12 This book reviews the evaluation research literature that has accumulated around 19 K-12 mathematics curricula and breaks new ground in framing an ambitious and rigorous approach to curricular evaluation that has relevance beyond mathematics. The committee that produced this book consisted of mathematicians, mathematics educators, and methodologists who began with the following charge: Evaluate the quality of the evaluations of the thirteen National Science Foundation (NSF)-supported and six commercially generated mathematics curriculum materials; Determine whether the available data are sufficient for evaluating the efficacy of these materials, and if not; Develop recommendations about the design of a project that could result in the generation of more reliable and valid data for evaluating such materials. The committee collected, reviewed, and classified almost 700 studies, solicited expert testimony during two workshops, developed an evaluation framework, established dimensions/criteria for three methodologies (content analyses, comparative studies, and case studies), drew conclusions on the corpus of studies, and made recommendations for future research.

International and Comparative Studies in Information and Library Science-Yan Quan Liu 2008 Comparative studies in information and library science published in the past ten years have reflected a broad spectrum of backgrounds, interests, and issues, but until now services between different countries, Asian nations in particular, have never been gathered or organized into a single source. As demand from researchers, students, directors, and practitioners for pertinent literature continues to grow, there is a definite and increasing need for a focused guide to international and comparative librarianship. International and Comparative Studies in Information and Library Science: A Focus on the United States and Asian Countries consists of eighteen previously published articles divided into seven categories that address issues such as research methodologies; information policy; professional education; information organization; and school, academic, and public libraries. It also features a comprehensive bibliography of related articles, books, proceedings, and other publications in both English and Chinese and four appendixes that list curricula, journal titles, conferences, and websites relating to International and comparative librarianship available at the time of publication. With this important compilation, Yan Quan Liu and Xiaojun Cheng fill an important and previously unmet need. Book jacket.

Changing European Academics-Marek Kwiec 2018-09-19 European academics have been at the centre of ongoing higher education reforms, as changes in university governance and funding have led to changes in academic work and life. Discussing the academic profession, and most importantly, its increasing stratification across Europe, Changing European Academics explores the drivers of these changes as well as their current and expected results. This comparative study of social stratification, work patterns and research productivity: Examines eleven national, higher education systems across Europe (Austria, Finland, Germany, Ireland, Italy, The Netherlands, Norway, Poland, Portugal, Switzerland and the United Kingdom) Provides a panoramic view of the European academic profession Confronts misconceptions of academic work and life with compelling results and detailed analyses Discusses new dilemmas inherent to the changing social and economic environments of higher education A thoughtful and comprehensive study of the changing academic profession in Europe, this book will be of interest to higher education practitioners, managers and policy makers, both in Europe and globally. Changing European Academics will benefit anyone whose work relates to changing academic institutions and changing academic careers.

Determinants of the Death Penalty-Carsten Anckar 2004-08-02 Determinants of the Death Penalty seeks to explain the phenomenon of capital punishment - without recourse to value judgements - by identifying those characteristics common to countries that use the death penalty and those that mark countries which do not. This global study uses statistical analysis to relate the popularity of the death penalty to physical, cultural, social, economical, institutional, actor oriented and historical factors. Separate studies are conducted for democracies and non-democracies and within four regional contexts. The book also contains an in-depth investigation into determinants of the death penalty in the USA.

Developing a Protocol for Observational Comparative Effectiveness Research: A User's Guide-Agency for Health Care Research and Quality (U.S.) 2013-02-21 This User’s Guide is a resource for investigators and stakeholders who develop and review observational comparative effectiveness research protocols. It explains how to (1) identify key considerations and best practices for research design; (2) build a protocol based on these standards and best practices; and (3) judge the adequacy.
and completeness of a protocol. Eleven chapters cover all aspects of research design, including: developing study objectives, defining and refining study questions, addressing the heterogeneity of treatment effect, characterizing exposure, selecting a comparator, defining and measuring outcomes, and identifying optimal data sources. Checklists of guidance and key considerations for protocols are provided at the end of each chapter. The User’s Guide was created by researchers affiliated with AHRQ’s Effective Health Care Program, particularly those who participated in AHRQ’s DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. More more information, please consult the Agency website: www.effectivehealthcare.ahrq.gov

The Research Imagination-Paul S. Gray 2007-08-13 The idea that science is a blueprint for research, and imagination gives research its life and purpose inspired this comprehensive explanation of research methodology. The authors' decades of experience have revealed that research is a craft requiring judgment and creativity, not simply memorization and application of the rules of science. Whether one is conducting an intimate one-on-one interview or a large-scale examination of an entire society, human imagination and scientific principles of inquiry go hand in hand. To that end, this book emphasizes scientific method, but also acknowledges its critics. It covers a wide variety of data-collection techniques, but presents them as reinforcing rather than competing with one another; thus striking a balance between qualitative and quantitative methods. It is designed for students and instructors who want a comprehensive treatment of a variety of research techniques with special emphasis on qualitative approaches.
