What Is Air Pollution | Environmental Pollution Centers
Definition. Air pollution can be defined as the presence of toxic chemicals or compounds (including those of biological origin) in the air, at levels that pose a health risk. In an even broader sense, air pollution means the presence of chemicals or compounds in the air which are usually not present and which lower the quality of the air or cause detrimental changes to the quality of life.

Air Quality & Health Questions and Answer
Air pollution increases the risk of respiratory and heart disease in the population. Both short and long term exposure to air pollutants have been associated to health impacts. More severe impacts affect people who are already ill. Children, the elderly and poor people are more susceptible.

Q2: How bad is air pollution? Air pollution is a major public health concern.

Air pollution its origin and
London, England 1952. Mist mingled with pollutants in the air, settling over the streets, so dense that visibility was severely limited and driving was unsafe. At first, people attempted to continue
