The Cultural Landscape - James M. Rubenstein 1999-06-01

Nature of Geography as Perceived in Systems Theory - Shamma 1994 Geography is not what we have assumed it, we have conceived it and we have perceived it, but that is what we have not imagined it is around us. It is a system in itself. Because, human behaviour becomes rational, when it acts individually, but is becomes rational, when it operates upon in a collective form. Therefore, it is very difficult to understand man and his behaviour in a given situation. So it is incredible to argue about the discipline, its past history and the methodological contents. It is a misconceived notion of set boundary and a goal of its own, in a multidimensional facets of the changing world complexes in which we are living. Geography in its manifestations begins with the land-scape evolution (physical basis), interacts with the phenomena culminating in human relationships, (cultural land-scape) of conceptual world of real and abstract, interactions and processes, conditions and relations of multivariate facets of elements. Geographers are thus, drawn to the illusion with perplex mind of geographical images. This perception has drawn geography and geographers both into a state of unending dilemma of academic jargon of puzzles i.e. whether it is founded on systems theory or simply an irrelevant distraction? Science provides us very sharp tools. But any craftsman will tell you it is the sharp tool which cane do most damage or harm when misapplied. It is apparently observed that geographers are badly operationalised with their blunted tools. The present attempt is thus, to discuss all those problems arises due to multidimensional approaches of the past, present analysis and future methodologies, more particularly in the system analog of systems theory, General Systems and the General Systems Theory, as all these notions have different connotations. How geography as a discipline is fitted well in the analogy of systems theory has been the main concerned to these volumes. Let us explore the possibilities-What Geography is? The first volume deals with the Systems Theory and Geography, whereas, the second interprets the Possible World of Geographer in Systems Theory. Contents Vol. I Part I-General Systems & Systems Theory; Chapter 1: General Systems Theory; Chapter 2: General Systems Theory; Specific Features; Chapter 3: General Systems Theory as a Metatheory; Chapter 4: Outline History of the Systems Theory; Chapter 5: The Systems Approach and its Development; Chapter 6: Classification of Systems into Open and Closed-Logic of Methodological Problems; Chapter 7: Systems Theory and Modern Sciences; Chapter 8: The Systems Approach in Social Sciences; Chapter 9: Paradox of Systems Analysis; Chapter 10: Prospects of the Systems Approach; Part II-Development of Nature of Geography; Chapter 11: Progress in Geography Through Ages; Chapter 12: German Contribution to Geography; Chapter 13: Geographers of the Second and Third Generation; Chapter 14: Leaders of the Fourth Generation; Chapter 15: French Geographers Contribution to Geography; Chapter 16: The Second Generation of French Geographers; Chapter 17: Geography in Indian Context; Chapter 18: Theories, Laws and Models: A Systematic Explanation in Geography; Vol. II Chapter 1: Nature of Geography; Chapter 2: Problem of Paradigm Shift: Conceptual Themes; Chapter 3: Geography and General Systems Theory; Chapter 4: American School and Geographers of the Time; Chapter 5: The Modern Perceptivism; Chapter 6: A Real World (Physical Geography) of Geographer; Chapter 7: Geographic Space Perception; Chapter 8: Environment as Perceived in Geography; Chapter 9: Diffusion Process in Geographic Research and Normative Values; Chapter 10: Welfare Geography of Economics; Chapter 11: In Search of Systematic Geography; Chapter 12: Geography in Systems
Understanding ‘race’ and ethnicity 2e-Chatto, Sangeeta 2019-04-01 In the last few years, national and international politics have been characterised by the erasure of ‘race’ and ethnicity within public policy and discourse. Events such as the escalation in ‘race’ hate crime associated with the EU Referendum in the UK, the rise of the far right across European politics, or Donald Trump’s promise to build a wall across Mexico, contradict the political rhetoric of the ‘arrival’ of a ‘post-race’ era. This new edition of a widely-respected textbook examines welfare policy and racism, alongside institutional racism and community cohesion within a broad policy framework. Fully updated, it contains: • a new foreword by Professor Kate Pickett, acclaimed co-author of The Spirit Level • two new chapters on ethnicity, disability and chronic illness, and education policy and ‘race’ respectively • recent changes in black and minority ethnic demographics in the UK • a post-script from a minority student on her struggle to make a new home in Britain Suitable for undergraduate and postgraduate courses in social policy, sociology and applied social sciences, it includes: • updated empirical data and examples • links to external sources for further reading • questions for discussion, reflection and further learning. Covering an unrivalled range of social welfare issues, the marriage of theory, history and contemporary data makes important and difficult debates about ‘race’, ethnicity, discrimination and social equality more accessible to a student audience as well as policy and welfare practitioners interested in its global themes of immigration, austerity and securitisation.

Feminist Spaces-Ann M. Oberhauser 2017-09-27 Feminist Spaces introduces students and academic researchers to major themes and empirical studies in feminist geography. It examines new areas of feminist research including: embodiment, sexuality, masculinity, intersectional analysis, and environment and development. In addition to considering gender as a primary subject, this book provides a comprehensive overview of feminist geography by highlighting contemporary research conducted from a feminist framework which goes beyond the theme of gender to include issues such as social justice, activism, (dis)ability, and critical pedagogy. Through case studies, this book challenges the construction of dichotomies that tend to oversimplify categories such as developed and developing, urban and rural, and the Global North and South, without accounting for the fluid and intersecting aspects of gender, space, and place. The chapters weave theoretical and empirical material together to meet the needs of students new to feminism, as well as those with a feminist background but new to geography, through attention to basic geographical concepts in the opening chapter. The text encourages readers to think of feminist geography as addressing not only gender, but a set of methodological and theoretical perspectives applied to a range of topics and issues. A number of interactive exercises, activities, and ‘boxes’ or case studies, illustrate concepts and supplement the text. These prompts encourage students to explore and analyze their own positionality, as well as motivate them to change and impact their surroundings. Feminist Spaces emphasizes activism and critical engagement with diverse communities to recognize this tradition in the field of feminism, as well as within the discipline of geography. Combining theory and practice as a central theme, this text will serve graduate level students as an introduction to the field of feminist geography, and will be of interest to students in related fields such as environmental studies, development, and women’s and gender studies.

Fractal Geography—André Dauphiné 2013-01-09 Our daily universe is rough and infinitely diverse. The fractal approach clarifies and orders these disparities. It helps us to envisage new explanations of geographical phenomena, which are, however, considered as definitely understood. Written for use by geographers and researchers from similar disciplines, such as ecologists, economists, historians and sociologists, this book presents the algorithms best adapted to the phenomena encountered, and proposes case studies illustrating their applications in concrete situations. An appendix is also provided that develops programs written in Mathematica.

Contents 1. A Fractal World. 2. Auto-similar and Self-affine Fractals. 3. From the Fractal Dimension to Multifractal Spectrums. 4. Calculation and Interpretation of Fractal Dimensions. 5. The Fractal Dimensions of Rank-size Distributions. 6. Calculation and Interpretation of Multifractal Spectrums. 7. Geographical Explanation of Fractal Forms and Dynamics. 8. Using Complexity Theory to Explain a Fractal World. 9. Land-use Planning and Applications in Concrete Situations. An appendix is also provided that develops programs written in Mathematica. For geographers across the globe this book provides the arguments for a return to the teaching of geography and why they should reject the politicisation of the subject by education policy makers and politicians. Standish's careful critique shows the necessity of a depoliticised geography curriculum the irony of which would be that it would ensure that every child could point to a map. Prof. Dennis Hayes - Oxford Brookes University, UK

A prescient and critical analysis of the changing face of geography teaching. This book deserves to be widely read and debated. Alex Standish's book puts current trends in geography teaching in historical and critical context. It comprises a forthright and timely defence of geographical education for its own sake. Dr Jim Butcher, FRSA, Department of Sport Science, Tourism and Leisure, Canterbury Christ Church University. Since the early 1990s, educational policy makers and some subject leaders have been seeking to fundamentally change the teaching of geography in UK and US schools, from a subject which encourages students to explore spatial concepts, ideas and skills, to a more ethics based subject concerned with the promotion of environmentalism, cultural diversity and social justice. In this book the new approach is critically examined, within a historical and ideological context, addressing a number of fundamental questions:

In this book the new approach is critically examined, within a historical and ideological context, addressing a number of fundamental questions:

Should geography be used as a tool for the delivery of citizenship ideals? How does this affect the intellectual and moral value of geographical education for young people? If the state and teachers are taking more responsibility for the values, attitudes and emotional responses of students, how will they learn to develop these qualities for themselves? If global perspectives shift the focus of education from learning about the outside world to learning about the self, what is its vision of social progress and conception of social change? This book advocates a return to liberal models of education, arguing that the new approach to geography currently being promoted for schools fundamentally undermines the educational value of the subject, and the freedom of young people to shape the world in which they live. A vital resource for teachers and student teachers alike. Global Perspectives in the Geography Curriculum makes a significant contribution to the growing debate about the future direction of the discipline itself.

World Development Report 2009—World Bank 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to the development. Smaller transformations along these three dimensions—density, distance, and division—are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion

is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

Essentials of World Regional Geography-George White 2013-10-04 Essentials of World Regional Geography, 3e gives readers an approach that combines fundamental geographical elements, internal regional diversity, and contemporary issues. This approach allows serious discussion of cultural and environmental issues, as well as political and economic issues. Essentials of World Regional Geography has chapter openings with a physical features map of the region, which includes short accounts of people or events to provide a personal flavor of the region, an outline of the chapter contents, and a short section placing the region in its wider global context. Each regional chapter is consistently organized by three sections. The first section summarizes the distinctive physical and human geographies of the region; the second section explores the internal diversity of the region at subregional, selected country, and local levels. The third section focuses on a selection of contemporary issues that are important to the people of each region and frequently have implications for the rest of the world. Each regional chapter follows the same framework, allowing students to easily make comparisons from one world region to the next. This new edition now offers a suite of digital resources including ConnectPlus, LearnSmart, and SmartBook!
