Prescription drug - Wikipedia
A prescription drug (also prescription medication or prescription medicine) is a pharmaceutical drug that legally requires a medical prescription to be dispensed. In contrast, over-the-counter drugs can be obtained without a prescription. The reason for this difference in substance control is the potential scope of misuse, from drug abuse to poisoning medicine without a license and without

Perioperative anticholinergic management for lumbar
Lumbar puncture (LP) is an important and frequently performed invasive procedure for the diagnosis and management of neurological conditions. There is little in the neurological literature on the topic of perioperative management of anticholinergics in patients undergoing LP. Current practice is therefore largely extrapolated from guidelines generated by anaesthetists bodies on neuromuscular

Pharmaceutical industry - Wikipedia
The pharmaceutical industry discovers, develops, produces, and markets drugs or pharmaceutical drugs for use as medicines to be administered (or self-administered) to patients, with the aim to cure them, vaccinate them, or alleviate the symptoms. Pharmaceutical companies may deal in generic or branded medications and medical devices. They are subject to a variety of laws and regulations that
