Feed efficiency in swine - J.F. Patience 2012-06-15 'Feed efficiency in swine' has been prepared as a comprehensive treatise on the current state of our understanding of this topic, which is so important to the pork industry. Each chapter is written by international authorities who understand both the science and application of their topic area. The book provides detailed insight into the many factors affecting feed efficiency, ranging from diet processing to herd health, from nutrition to physiology and from day-to-day barn management to the adoption of advanced technologies. The authors explain such practical aspects as the challenge of interpreting feed efficiency information, effects of the rate of liquid feeding and the use of feed efficiency information in the management of swine production, including nutritionists, veterinarians, farm management specialists, and experts in animal behavior and housing.

Aquaculture Technology and Environment - Ujwala JadHAV 2009-03-03 Aquaculture, farming of aquatic animals and plants, is one of the world's fastest growing food producing systems. This text provides an excellent elucidation of the concepts of aquaculture along with its impact on the environment. Written in a style that makes the subject both interesting to read and easy to understand, this text describes the scope and principles of aquaculture, and the design and management of Tilapia aquaculture facilities. It explains different types of culture systems and practices, as well as different criteria for the selection of species for culture. It also discusses some common diseases to aquaculture and measures to prevent them. It further discusses the importance of a balanced diet for aquatic species and focuses on harvesting and post-harvesting technology. Aquaculture has gained immense importance in recent years and it is now applied to aquaculture for the production of non-food species. This book discusses in detail the role of biotechnology in aquaculture. In addition, it deals with different aquaculture practices in India, such as culture of carp, prawn, pearl and seaweed. The text concludes with a discussion on the effects of aquaculture practices on the environment. Key Features Provides a list of major important aquaculture species cultured worldwide. Presents the latest data to enhance the utility of the text. Gives special emphasis on aquaculture practices in India. The book is intended for undergraduate and postgraduate students of zoology (B.Sc. and M.Sc.) and fisheries (B.F.Sc. and M.F.Sc.). It will also be useful to aquaculturists and environmentalists.

Handbook of dietary and nutritional aspects of bottle feeding - Victor R. Preedy 2014-06-25 Newborn babies are usually fed via the breast which ensures optimal development and emotional mother-child bonding. However, in some circumstances breast feeding may be either inadequate or impracticable. Historically, deficiencies in the presence of breast milk were ameliorated by formula feeding, but this was superseded by the introduction of artificial solid foods, i.e. formula or bottle foods. This handbook covers human foods for the breastfed infant and covers the most comprehensive way, each contribution starts with convenient summary points. The parts give information about historical and international aspects (North American, African and Chinese perspectives), composition, microbiological and chemical contaminants, allergy and immunology, effects on physical development and metabolic and effects on psychological and endocrinology. The Handbook of dietary and nutritional aspects of bottle feeding is essential reading material for nutritionists, dietitians, pediatricians, midwives, pharmacologists, medical care professionals, general practitioners and those interested in infant health in general.

The Climate Change Phenomenon - Shantanu Panigrahi 2021-08-19 This Book is the result of what the work of the author was summarized into in terms of the Environmental impact of human activities and how we humans must sort ourselves out to live to conserve, preserve and harmonise with all components of Nature in a wholesome and holistic approach before the catastrophe of widespread destruction of the Planet takes place. The phenomenon described incorporates all human activities including religious basis of human conduct that is argued to be at the root cause of the problems that the inhabitants of the planet face in the present era.
