Surveillance, Closed Circuit Television and Social Control - Clive Norris 2016-12-05 The rise of CCTV camera surveillance in Britain has been dramatic. Practically every major city now boasts a CCTV system aimed at, among other things, preventing, detecting and reducing the fear of crime. Increasingly these developments are mirrored in villages, shopping malls, residential estates, transport systems, schools and hospitals throughout the country. In short, for the majority of citizens it is now impossible to avoid being monitored and recorded as we move through public space. Surveillance, CCTV and Social Control represents the first systematic attempt to account for this phenomenon. It brings together leading researchers from the fields of anthropology, criminology, evaluation, geography, sociology and urban planning to explore the development, impact and implications of CCTV surveillance. Accordingly attention is directed to a number of key questions. How does CCTV fit with the trends of late modernity? Does CCTV reduce crime or merely shift it elsewhere? How should CCTV be evaluated? What is the significance of CCTV for women’s safety? How adequate is the regulation of CCTV? In the light of recent technological developments what is the future of CCTV surveillance?

COURT SECURITY-Tony L. Jones 2003-01-01 In recent years, there has been a sharp rise in acts of violence in the courts. These acts range from minor disturbances and physical assaults to murder and mass destruction. The potential exists for violence to occur in any court system regardless of location. Unfortunately, many courts at all levels of the judicial system have been slow or even reluctant to implement adequate security measures. This book is designed to prove the folly in such denial. It provides hard statistics and observations that highlight this unique visceral security environment. The text is specifically designed to help those charged with developing and implementing security measures to reevaluate current methods for safeguarding the judicial process. Presented in four sections, the first discusses perpetrators planning an attack and reviews types of perpetrators, target selection, tactics, operations styles, the mechanics of violent attacks, and thwarting attacks. Section two discusses in much detail a multitude of integrated security systems now available for court facilities. The third section presents effective response mechanics for courthouse violence, and the final section reviews tactical considerations for training, containment, and responding to explosive devices. The text serves as a substantial resource in providing the most current state-of-the-art information on security operations and technologies in a very clear but in-depth format. The ultimate goal of this book is to emphasize that court security in today’s world must be constantly reexamined, revamped, and upgraded to protect human and physical assets. This unique and comprehensive text will be invaluable to courthouse administrators, security professionals, law enforcement personnel, judges, lawyers, and college-level students of security.
